

Environmental Management Systems

Meeting ISO 14001 requirements

Learn how to build your integrated management system to meet the requirements of the 2015 revision of the ISO 14001 environmental management system standard.

A hands-on course designed for the Manager responsible for

- Health and Safety, Quality, and/or Environment
- Obtaining and maintaining management system compliance with the ISO 14001 standard
- Managing the environmental impacts of your operations
- Preparing for emergencies
- Operating within consents and the law
- Improving environmental performance

Learn how you can add to your existing management system rather than build a completely separate system to meet the requirements of ISO 14001.

The Environmental Management Systems course is designed for process owners, senior internal auditors, environmental managers and those responsible for maintaining legal compliance. It is ideal for leaders and managers who desire to lift their current management systems to the internationally recognised standard for environmental practice.

One day Environmental Management Systems course

This course has been updated for 2015 and includes a mix of discussion and interactive group exercises. Some pre-course work, collecting data about your organisation will give you an advantage in getting the best from the course. There are no pre-requisites for attending.

Learning outcomes

You will have gained the following knowledge and skills and be able to;

- Understand the ISO 14001:2015 standard
- Integrate ISO 14001 standard requirements into your existing Management System
- Prepare an environmental policy for your organisation
- Build an effective system for managing the environmental aspects and impacts in your organisation
- Plan and prepare for emergencies
- Develop objectives, targets and programmes for improving environmental performance
- Monitor, measure and report environmental performance
